Count the Benefits of Exercise

Simply knowing that exercise is good for you never fired up anyone to get off the couch. But understanding more about the true benefits of exercise just might. Get your doctor's okay for an exercise regimen, but see whether these many reasons don't spur more enthusiasm. Exercise can 1) make you happier generally, and improve your mood quickly; 2) help you achieve weight loss; 3) increase your energy level and help eliminate that sluggish feeling; 4) decrease your risk of chronic disease from diabetes, heart disease, cancer, and hypertension, and help alleviate symptoms, like pain; 5) delay the appearance of aging skin on your body; 6) improve your brain health, including memory; and 7) improve your sleep and benefit your sex life.

Build Resilience with Awareness

Resilience is the ability to recover quickly from illness, change, and adverse events. Resilience is a tool or resource you can draw upon and strengthen. Consider these few tactics that help develop resilience: 1) Build relationships with those you can turn to for support and who are dependable in their ability to offer acceptance, patience, and empathy. 2) Practice daily positive self-talk by achieving small goals you can reflect on for self-praise. Tip: Identify what you've been putting off, and start there. 3) Develop reflexes to spot the lessons learned from daily mistakes, slipups, and frustrations, and nip self-criticism in the bud. 4) Maintain a forward-looking mindset, with enjoyable goals/activities/tasks planned for days or weeks in front of you. Each of these tactics helps build resilience you can count on when the going gets tough.

Helping Kids Manage Stress

Kids feel states of emotional and physical tension just like adults do, but they are rarely taught stress management skills for the future. Why wait? Children are teachable, so simple coping skills taught early on can be lifelong tools for dealing with stress. Studies show stress levels are higher for kids today than in the past, thanks to pressure to accomplish, compete, and keep up. Easy stress management techniques to teach a young person include breathing exercises, meditation, and progressive relaxation. Could such skills play a role in preventing conditions like eating disorders or substance abuse? Hint: Model these strategies and gain the benefits for yourself, and you will make a bigger impact when you teach them to others.

Spend More Time Thinking

Do you automatically look at your smartphone at the slightest lull in activity? Researchers discovered that people enjoy being immersed in their own thoughts instead of technology in a research experiment that asked them to make a choice not to pick up their device. Self-awareness is the key to overcoming the reflex to pick up the phone. The upside to spending time with your own thoughts is that you'll soon be solving more problems, improving the creative parts of your mind, and making more decisions that lead to the life you want more quickly.

Your Role in Improving Workplace Communication

Studies show that strong workplace communication produces higher productivity and morale because employees sense a work environment that is more honest, reliable, and trusting. This leads to more employee engagement along with its benefits. Everyone wants better workplace communication, but spotting communication roadblocks and intervening in them is key. Most businesses experience trouble with internal communication periodically, often in similar ways. Knowing what these are can help you act to intervene and prevent you from becoming part of the problem. This is how you play a vital role in helping promote a healthy and productive workplace. Here are some of the most common workplace communication challenges: 1) Slow movement of information. Solution: Don't hold on to information or delay its dissemination as a tool for maintaining control or demonstrating authority. 2) Not thinking before you communicate. Solution: Know what your communication goals are so you communicate completely. 3) Fear of feedback. Solution: Ask for it. Better a bruised ego than be on the wrong track. 4) Not speaking up. Solution: Pay attention to that gnawing feeling that you should say something. 5) Silence. Solution: Be proactive and keep others up to date. Don't wait for others to ask, "How's the project going?" 6) Sitting on bad news. Solution: If others have to know, then they have to know. Similar to #6, be proactive. Delay tends to increase the shock value of bad news and it feeds on itself, making it even more difficult when it is ultimately shared.

Get Relief from Caregiver Stress

Sixty-eight percent of caregivers are women (aarp.org) who spend an average of 20 hours per week caring for a loved one. Most people don't know that caregiving is one of the toughest and most stressful jobs? You need physical help with tasks, decisions, meal prep, errands, and chores. Emotional support is needed to help you deal with the stress of caring for an elderly family member or other loved one with special needs. If you are experiencing caregiver stress, connect with FSEAP today for a childcare or eldercare consultation, and let the professionals help to ease your burden. Consultations include information about daycare centres, childcare services, care for children with special needs, home support services, eldercare needs, long-term care and seniors' housing, day programs, health services, and social and educational programs.
